Séance n°3: Prog réseau

Programme

- Présentation du protocole mqtt
- Prise en main du robot : moteurs, servos, module suiveur de ligne...
- Création d'une télécommande basique pour contrôler le robot

Communication avec le robot

Socket:

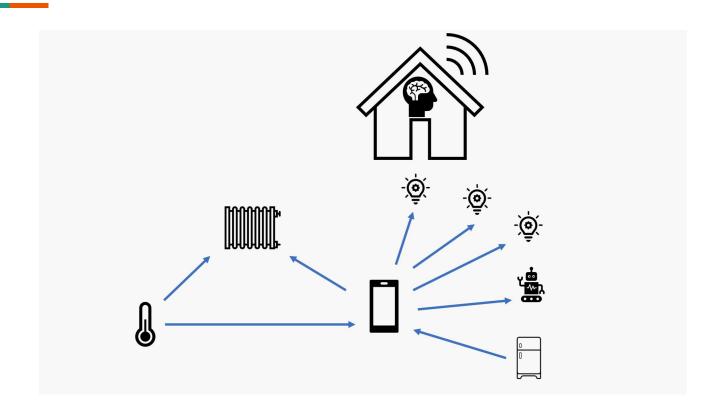

• connexion tcp / udp classique avec la lib socket

MQTT:

Utilisation des interruptions (vs polling)

Voir: https://github.com/AlexisDel/ProgReseau/blob/main/documentation/id%C3%A9es/Communication.md

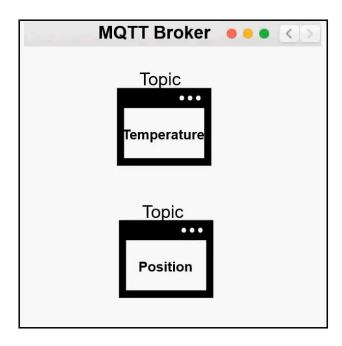

Machine to Machine (M2M)

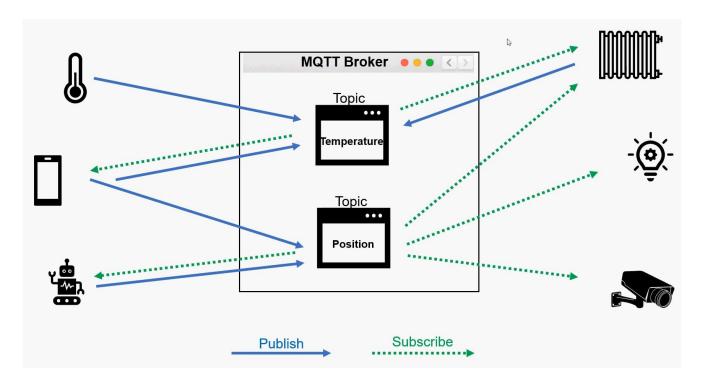

Bande passante limitée et latence élevée

 $((\bullet))$ Léger & efficient QoS

Communication *publish-subscribe*

Communication *publish-subscribe*

Topics, Wildcards

Topic: maison/rez-de-chaussée/salon/température

Wildcards:

- maison/rez-de-chaussée/+/température
- maison/rez-de-chaussée/#

Code

Publisher:

```
import paho.mqtt.client as mqtt
from random import randrange, uniform
import time

mqttBroker = "mqtt.eclipseprojects.io"
client = mqtt.Client("Temperature_Inside")
client.connect(mqttBroker)

while True:
    randNumber = uniform(20.0, 21.0)
    client.publish("TEMPERATURE", randNumber)
    print("Just published " + str(randNumber) + " to Topic TEMPERATURE")
    time.sleep(1)
```

Subscriber:

```
import paho.mqtt.client as mqtt
import time

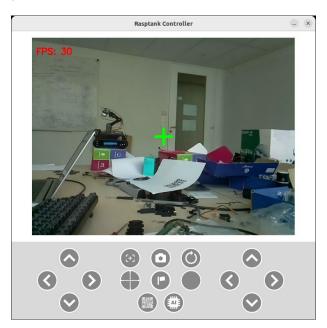

def on_message(client, userdata, message):
    print("Received message: ", str(message.payload.decode("utf-8")))

mqttBroker = "mqtt.eclipseprojects.io"
client = mqtt.Client("Smartphone")
client.connect(mqttBroker)

client.loop_start()
client.subscribe("TEMPERATURE")
client.on_message = on_message
time.sleep(30)
client.loop_end()
```

Télécommande

- Version 1 : simple (CLI)
- Version 2:

 $Voir: \underline{https://github.com/AlexisDel/ProgReseau/blob/main/documentation/id\%C3\%A9es/T\%C3\%A9l\%C3\%A9commande.md$
